A Little About FLO

- Employee Owned
- Located in Portland and Seattle
- Experts in the design, implementation and use of GIS & data analytic solutions

					Local State/County Federal
Business	School Districts	Non-Profits	Utilities	Government	

Topics

- Asset Management Systems (AMS/CMMS)
- Geographic Information Systems (GIS)
- Steps to ensure Successful Implementation

Asset Management

The process of maintaining and managing assets once acquired or built

Asset Management

AM Process Sophistication:

- Identify and locate
- How to maintain
- How to track condition
- Identify likelihood and impact of failure
- Evaluate consequences of failure

Asset Management

Goal:

Limit failure and sustain service at lowest cost

- \$\$ Savings through targeting efforts, improving decision making and optimizing asset life

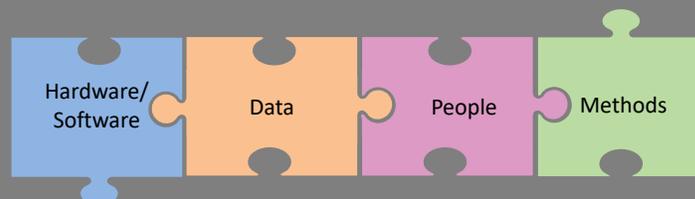

Role of an AMS/CMMS

- Manage lifecycle activities related to your assets
- Handle maintenance, work orders etc
- Stores asset and work history
- Valuable data that can be used to assess asset performance, and identify issues

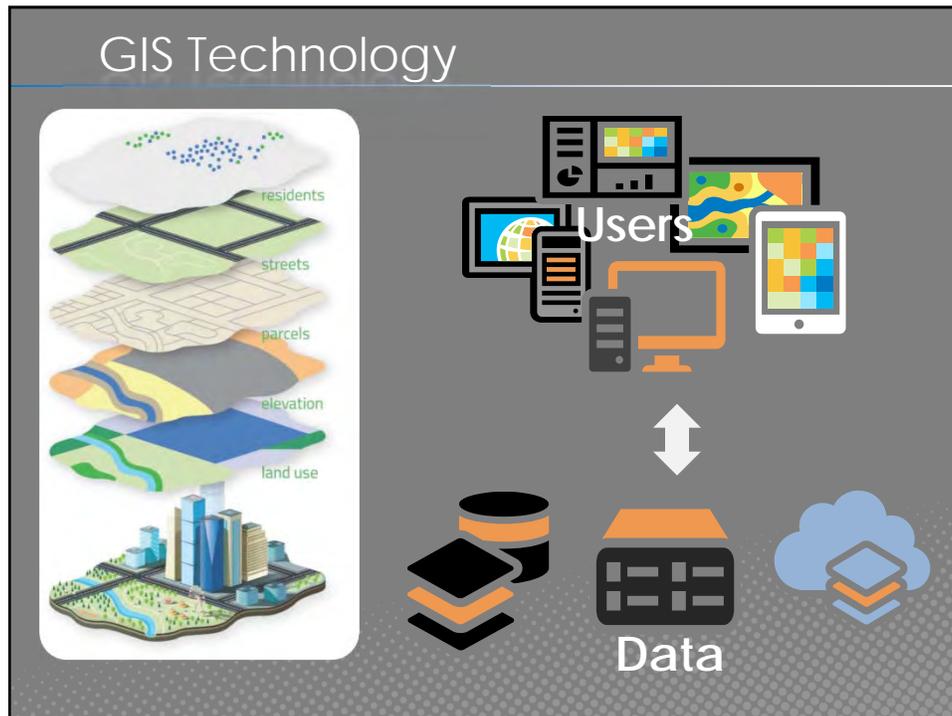

Geographic Information System

A system to gather, manage and analyze spatial data

- ROI through data visibility, new capabilities, integrations and efficiencies

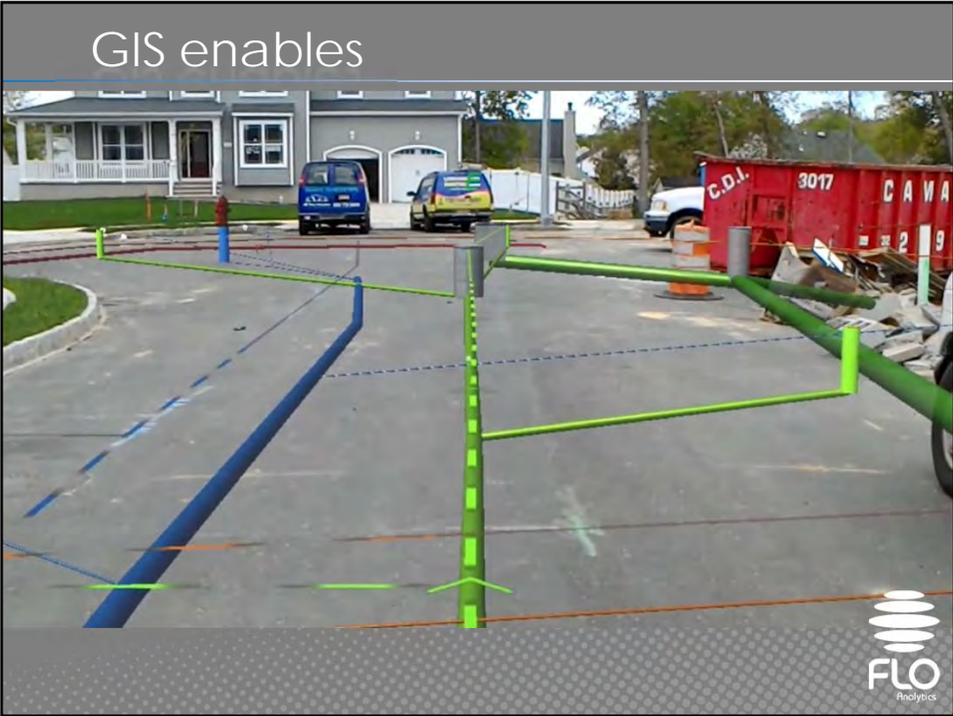

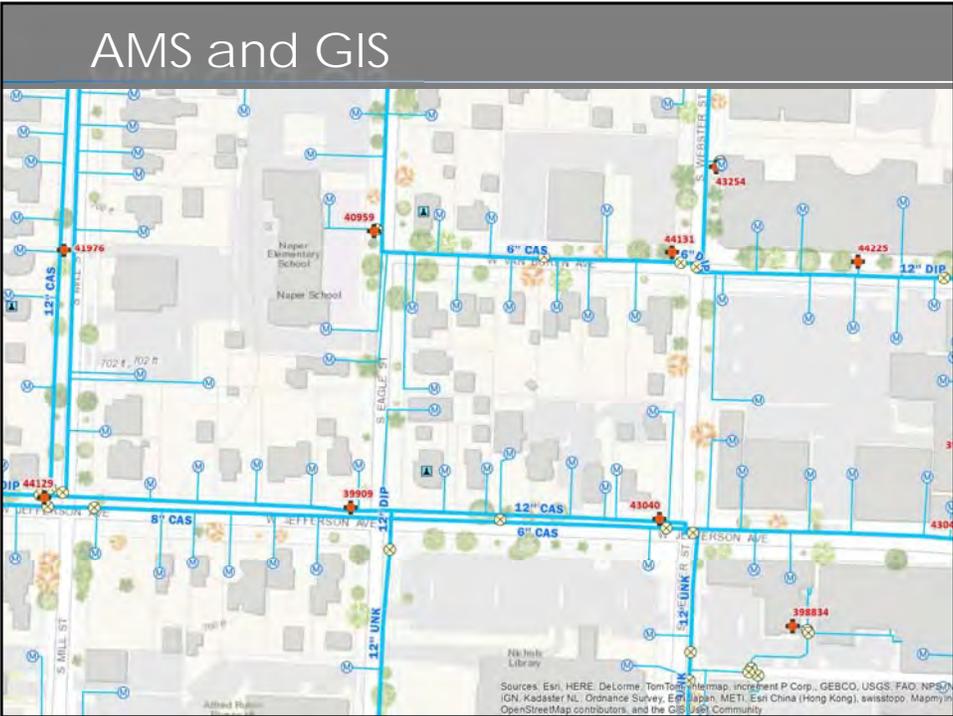

Role of GIS

- Manage asset **location**, see related information (addresses, etc)
- Planning, design and construction
- Visualize assets by attributes – see condition across the network
- Analysis – asset failures, nearby assets, analyze consequences

The background image shows a person in a blue shirt and yellow safety vest using a tablet device outdoors. The background is a blurred construction site with various pieces of equipment and structures.

The logo for FLO Analytics, featuring the word 'FLO' in a large, bold, sans-serif font above the word 'Analytics' in a smaller font, with a stylized graphic of horizontal lines above the text.

Common "barriers"

- Complexity
- "We are too small"
- Unsure about GIS
- Costs too much
- Personnel and Skillsets
- Data Availability
- Not sure where to start!

Successful Implementation

- Strategic Planning
- Organizational Use
- Data and Inventory
- Data Maintenance
- Integration and Analytics

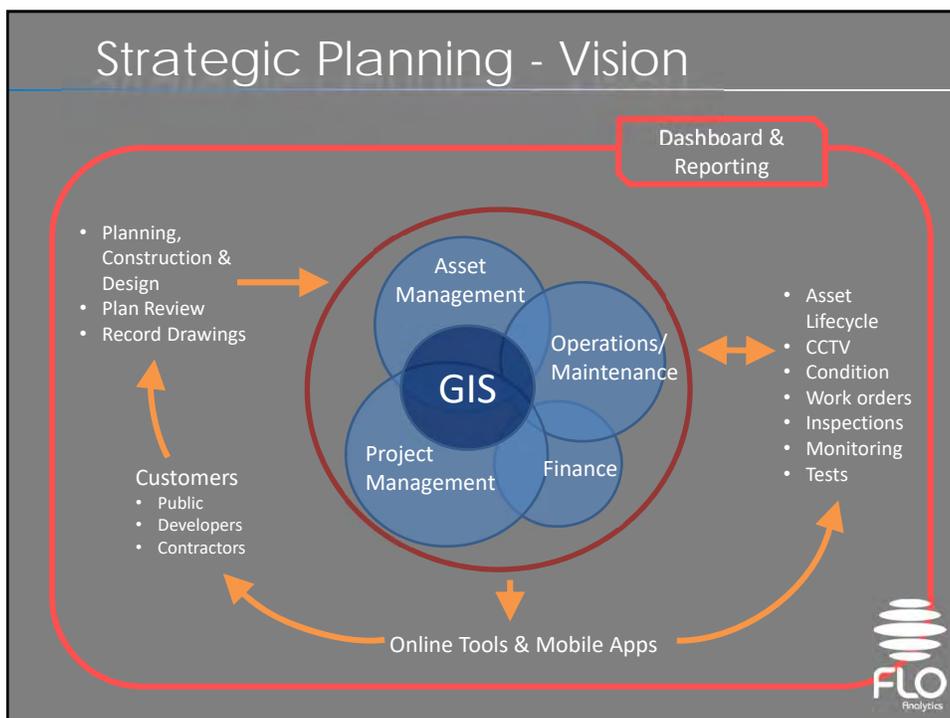

Strategic Planning

Levels of service
 Key Performance Indicators
 A vision of what you would like to do with your ideal system

- Data, Tools
- Workflows and Processes
- Decision Making
- Efficiency and savings

Strategic Planning

- Make specific goals
 - Key objectives
 - Address an issue and identify business value
 - Front desk staff able to answer queries directly
 - Field Staff have up to date information
 - Departments sharing data
 - Integration between systems to remove duplicated efforts

Assess your Current Resources

- Software and hardware
 - Servers, Databases
 - Self-host or cloud?
 - GIS/Asset management
 - Other key software

Current Resources

- Staff skills and responsibilities
- What Data you have and how you get it
 - CAD
 - Paper
 - Institutional Knowledge

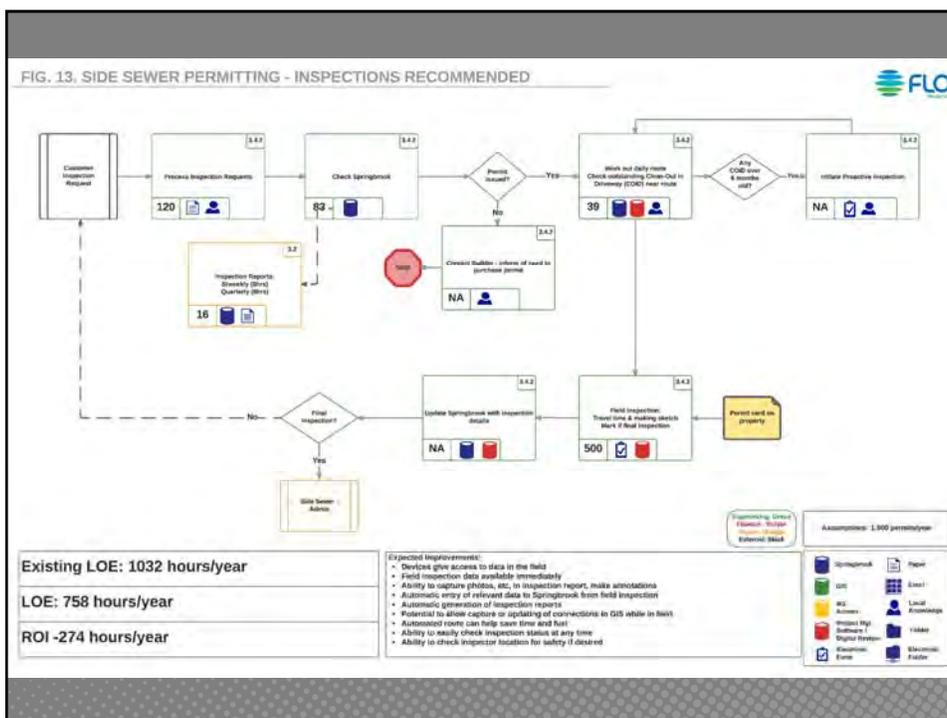

Current Resources

- Budget
 - ROI
 - Funding
- Other departments

Workflows and detail

- Define...workflow for key processes
- Measure...time/cost/customer service/quality
- Analyze...pain points, obsolete steps, opportunities
- Improve...available technology
- Monitor...dashboards

Selection

- What functions/tools will help you achieve your objectives?
- Return on Investment
 - Direct
 - Indirect
- Timeframe to see benefits

GIS questions to ask an AMS vendor

- “Describe how you integrate GIS data”
- “Do you have an option to synchronize data between the AMS and GIS?”
- “Are there any special requirements around GIS data formats or schemas?”

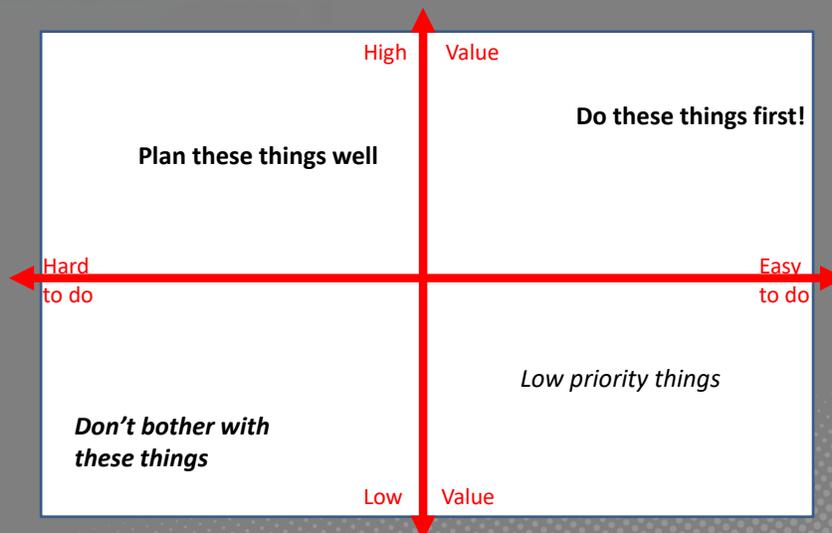

Considerations

- Total Cost of Implementation
- Field crews: Workflow changes, available tools, devices?
- Office staff: What data and tasks?
- Do you have any existing software or data formats that may be affected?

Plot to plan

Data Inventory

- Priority Task
- GIS First
- Data Sources
 - GIS
 - CAD/Electronic
 - PDF
 - Paper
 - Staff

Data/Inventory

- Establish asset inventory and locations
 - Attributes/Schema
 - Field capture
 - Records capture
 - Markup

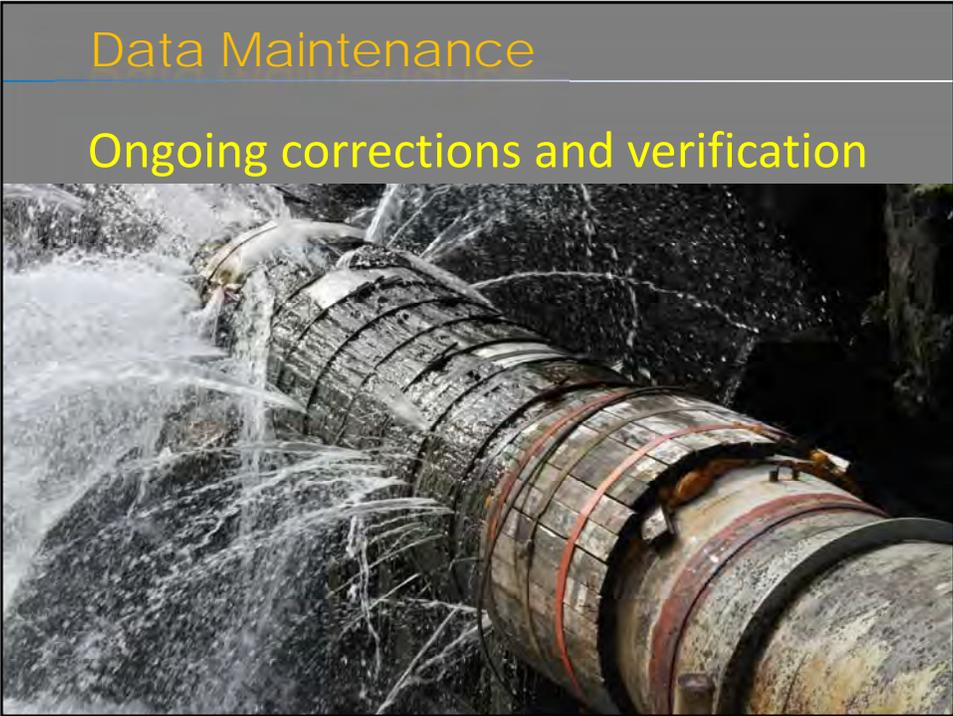

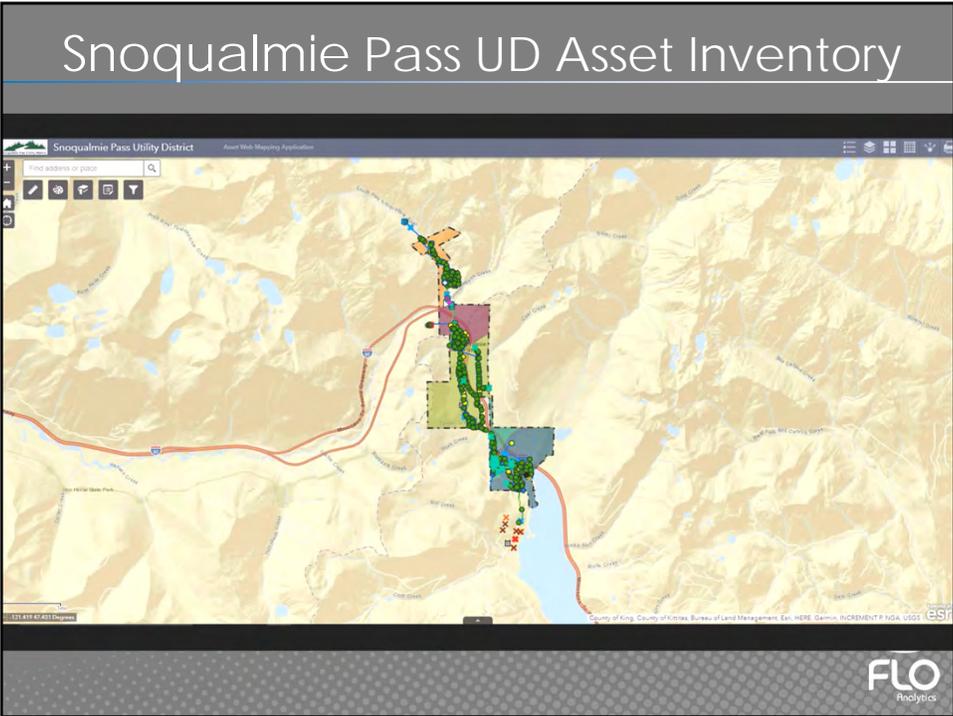

City of Kelso

Snoqualmie Pass Utility District

- No existing GIS data
- Location of assets unknown or difficult to find (snow)
- Entire utility system was mapped in 2.5 working days
 - ✓ 657 features
 - ✓ 19 feature types
 - ✓ Down to 3" accuracy

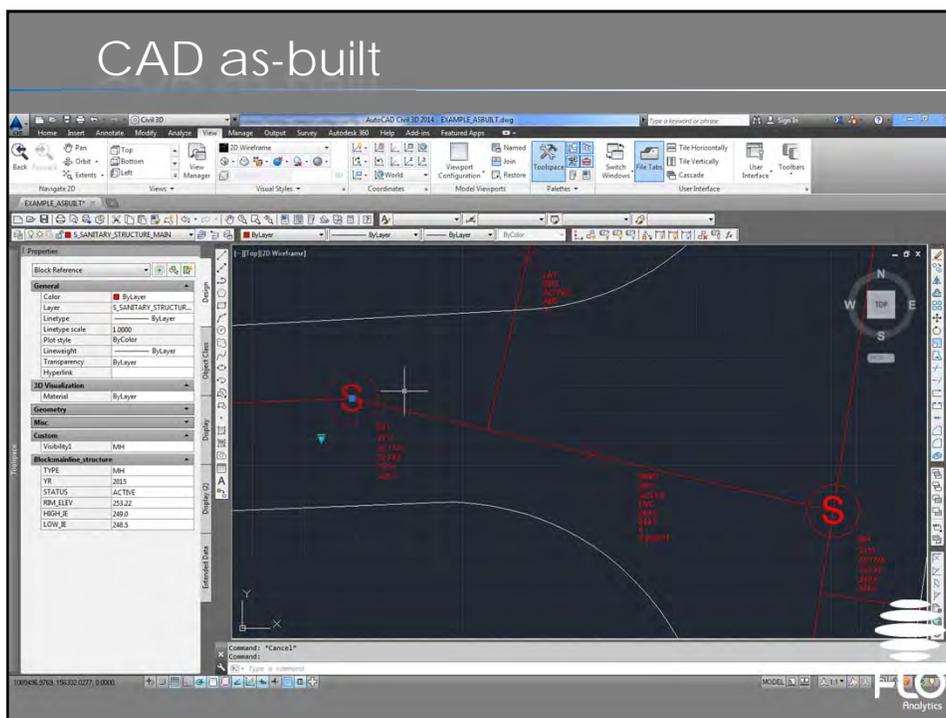

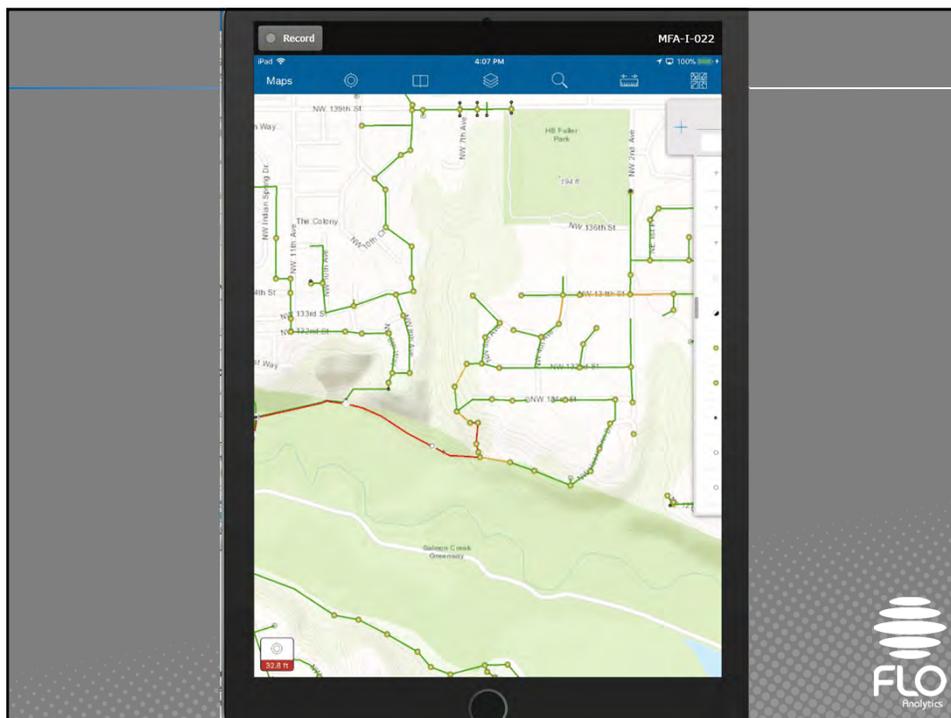

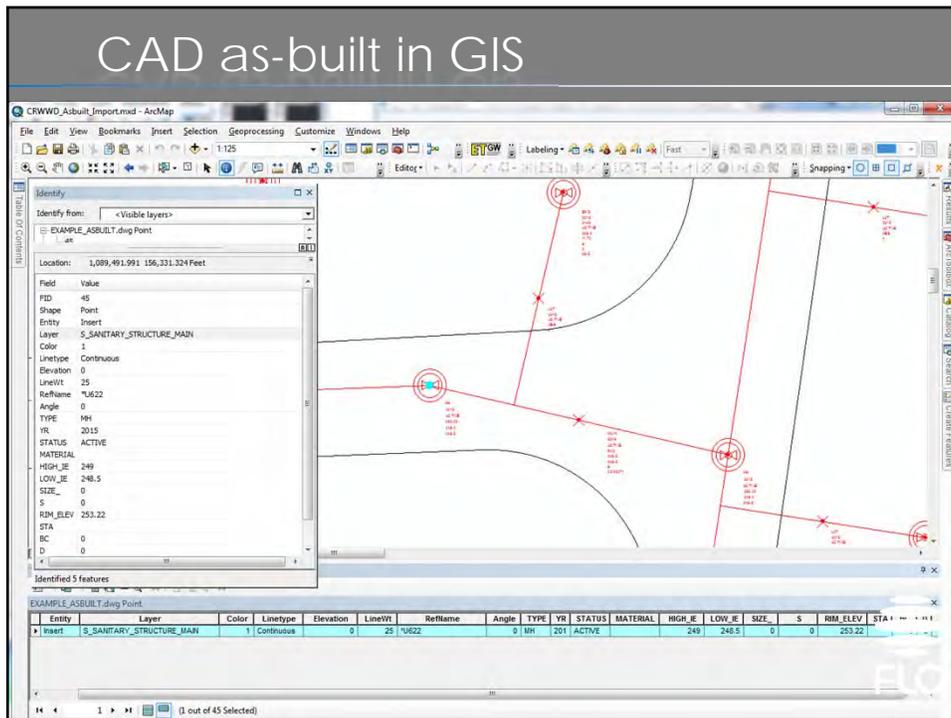

Data Maintenance

- What parts of the data will be updated by who?
 - location vs attribute
- What processes will you need to use?
 - As-builts (standards)
 - Field updates

CAD as-built

Integration

Combining data from different sources to
provide a unified view

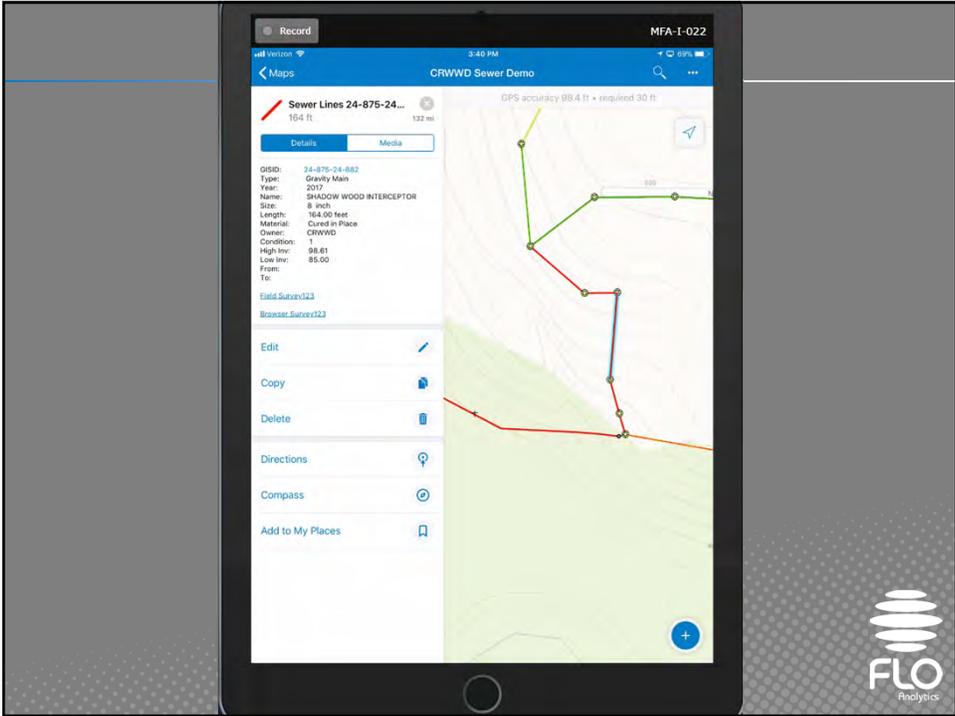

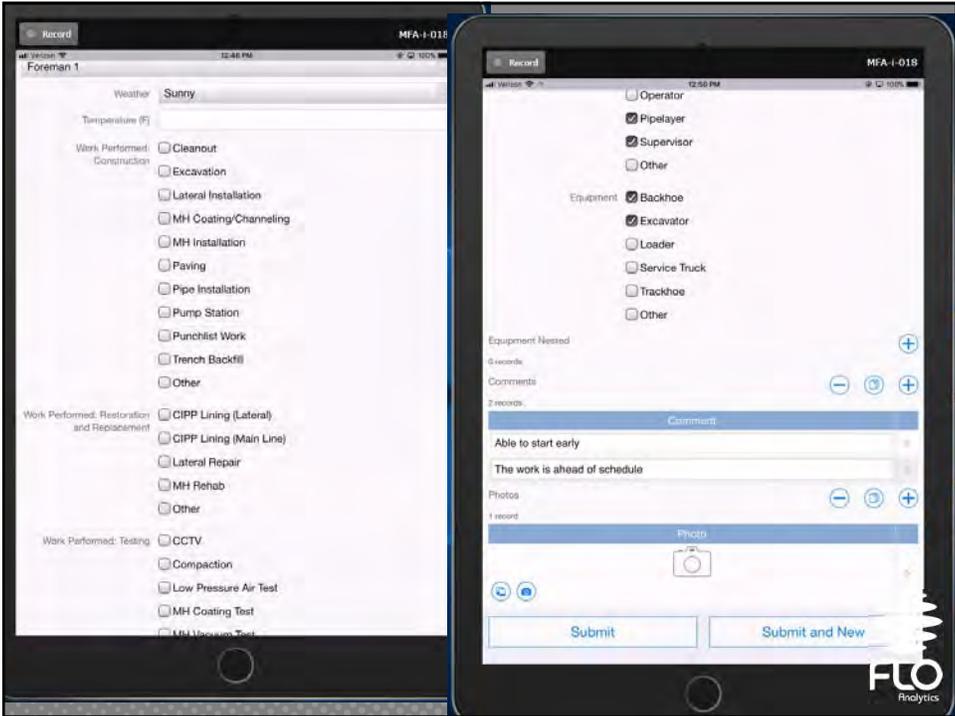

- Get the information required to do the job effectively
- Streamline reporting and management activities

Integration

- Specialized systems tend to perform their tasks very well
- Making a specialized system do other tasks is possible, but often not optimal
- Connecting systems can help maximize the return
- There are a number of ways to connect systems, but they are not all equal

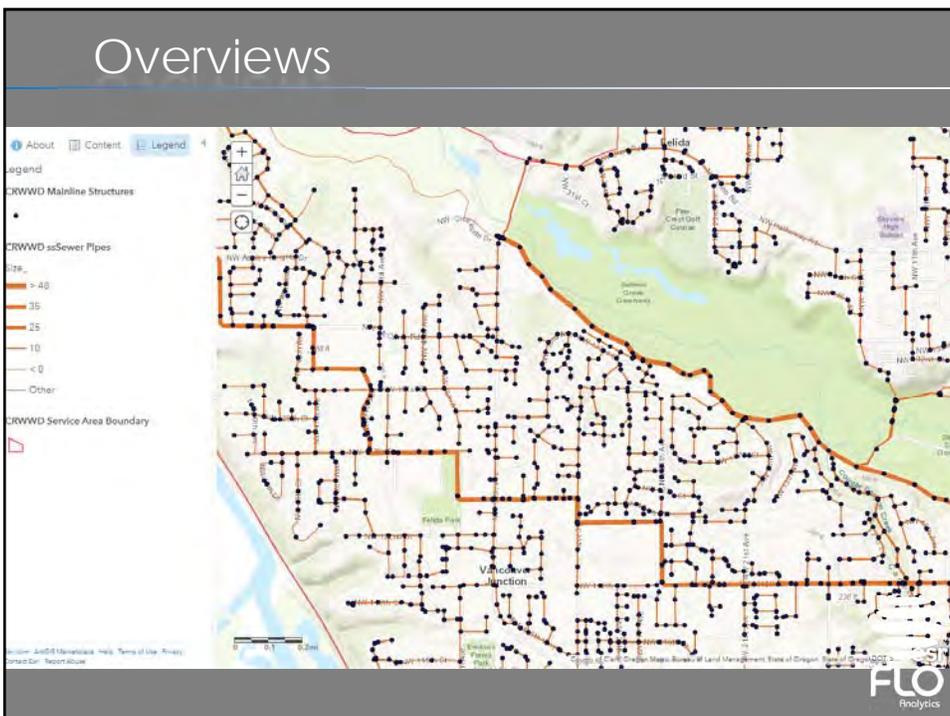

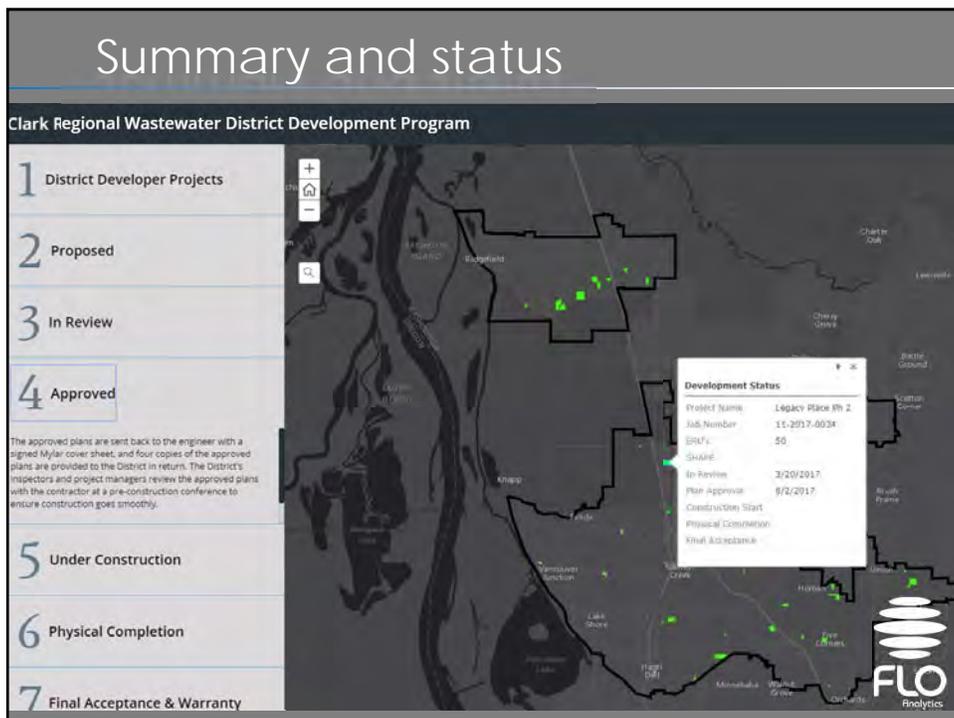

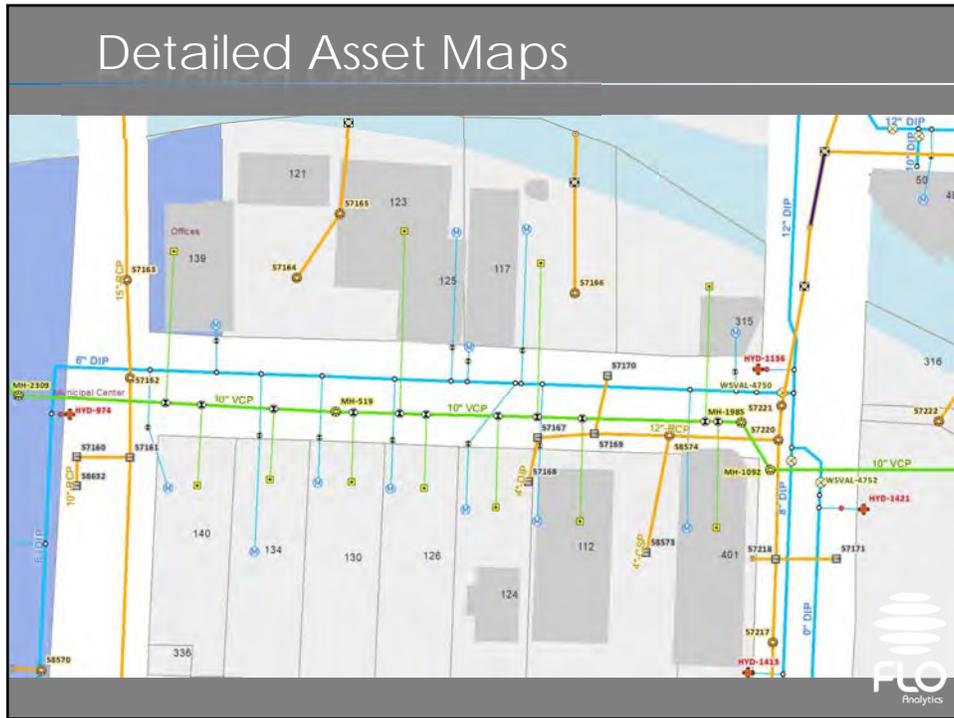

Data Visualization and use

- Maps
- Field/mobile tools

Overviews

Data Sharing

College Place Open Data Portal Sign In

Search Open Data

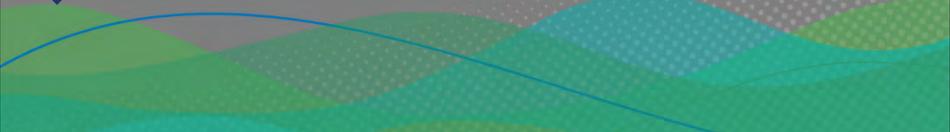

Explore Data Categories

-  Buildings
-  Boundaries
-  Community
-  Emergency Services

Summary

- Start with a general vision and some goals
- Tie these to activities and ROI
- Get your data in shape and plan to maintain it.
- Integrations can offer high ROI
- Visualize and use the data
